

# VectorStream Pro

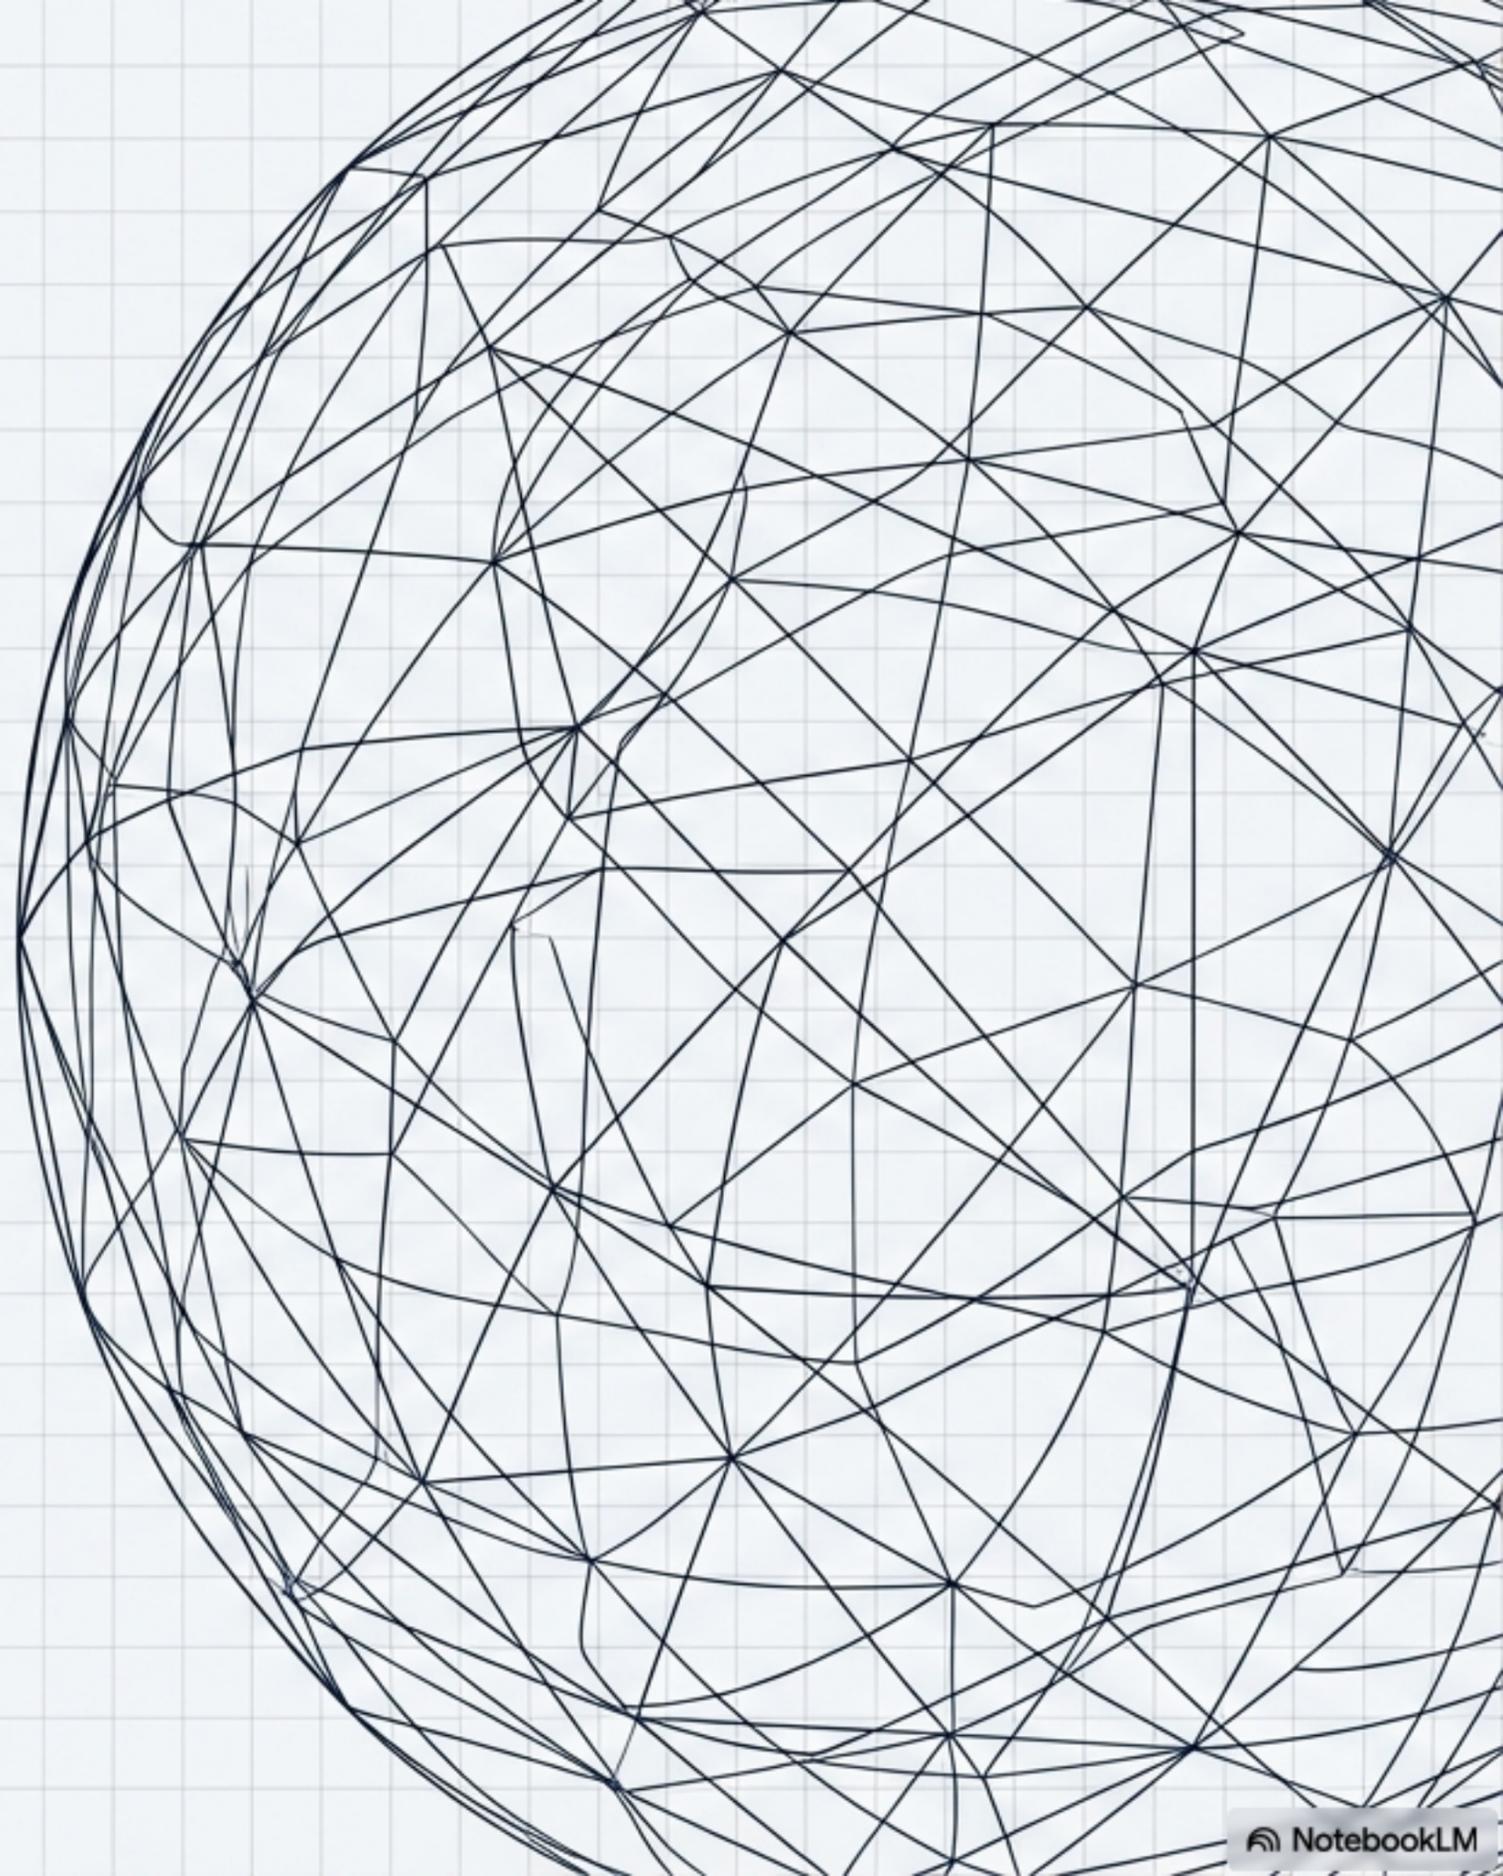

## Automated Trading Architecture

---

System Version: Institutional Grade v1.0

Architect: Yonas Abeselom

Status: RELEASED

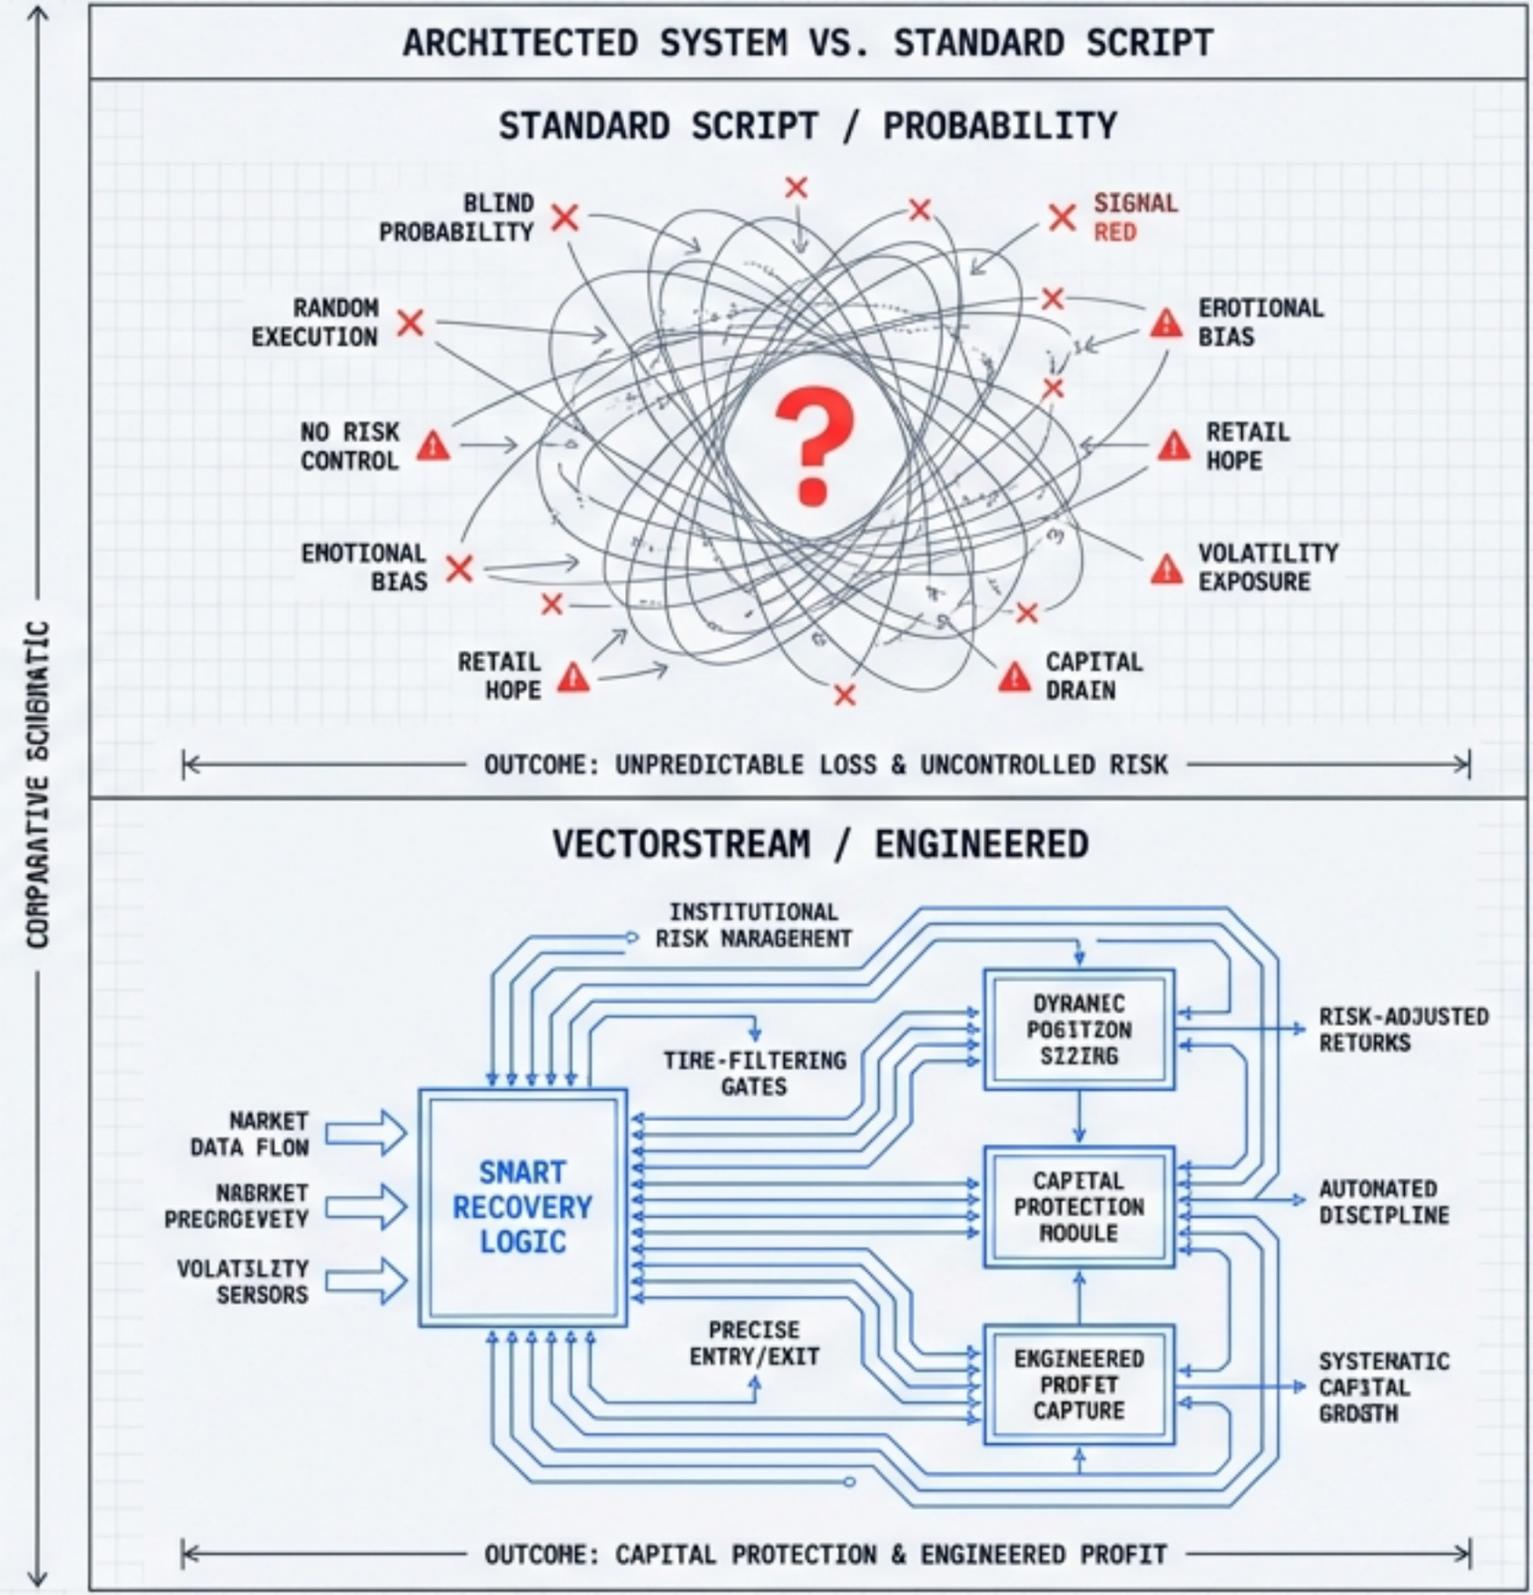

# Beyond Retail Probability. Engineered Recovery.

VectorStream Pro is a high-performance automated trading system for the MetaTrader 4 ecosystem. Unlike standard retail scripts that rely on blind probability and hope, VectorStream is built on "Smart Recovery" logic combined with institutional-grade risk management protocols.

**CORE PROMISE:** Engineered to capture profit from intrinsic market volatility while strictly strictly protecting capital through **Time-Filtering** and flexible Position Sizing.

18M Plex Rono

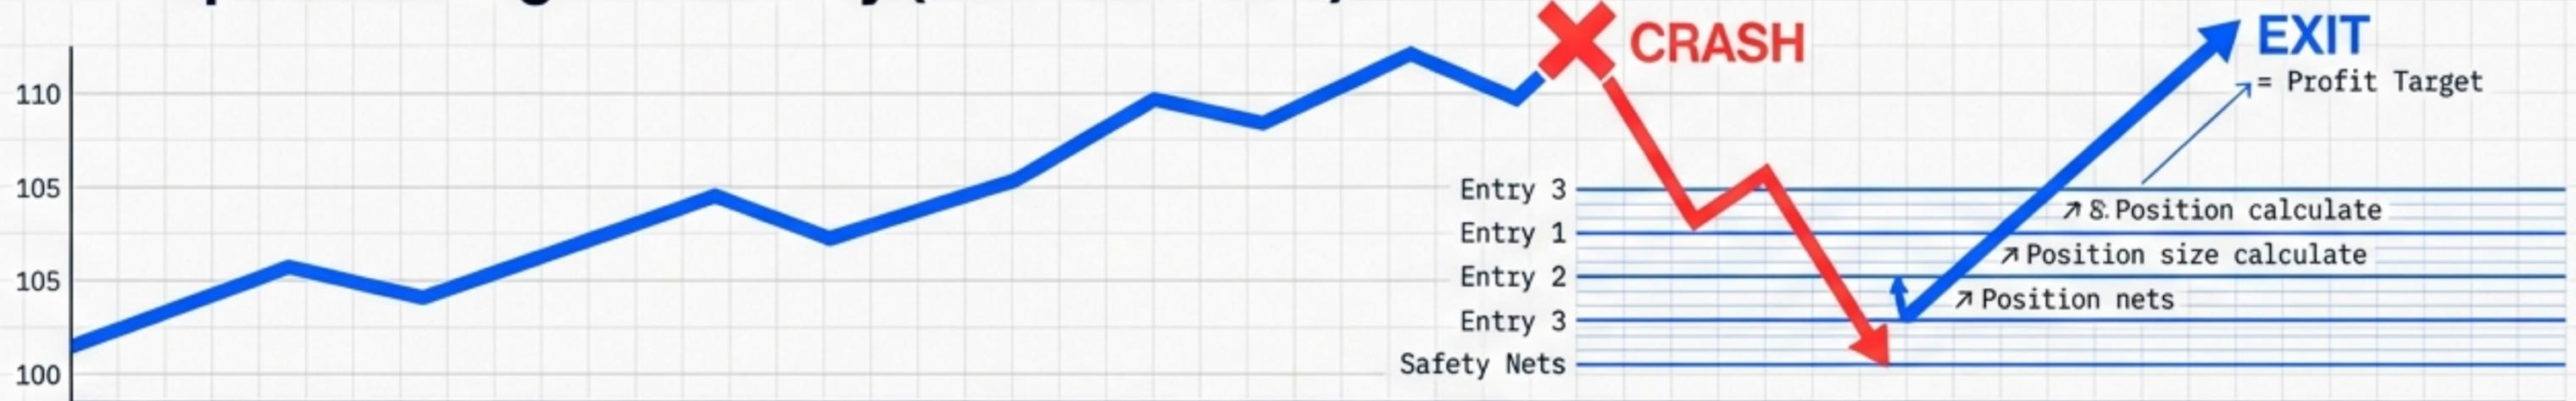

# Profit in Chaos: The Philosophy

## Concept 1: Blind Probability (The Competitor)

Guessing market direction and hoping the trend holds.

## Concept 2: Strategic Recovery (VectorStream)

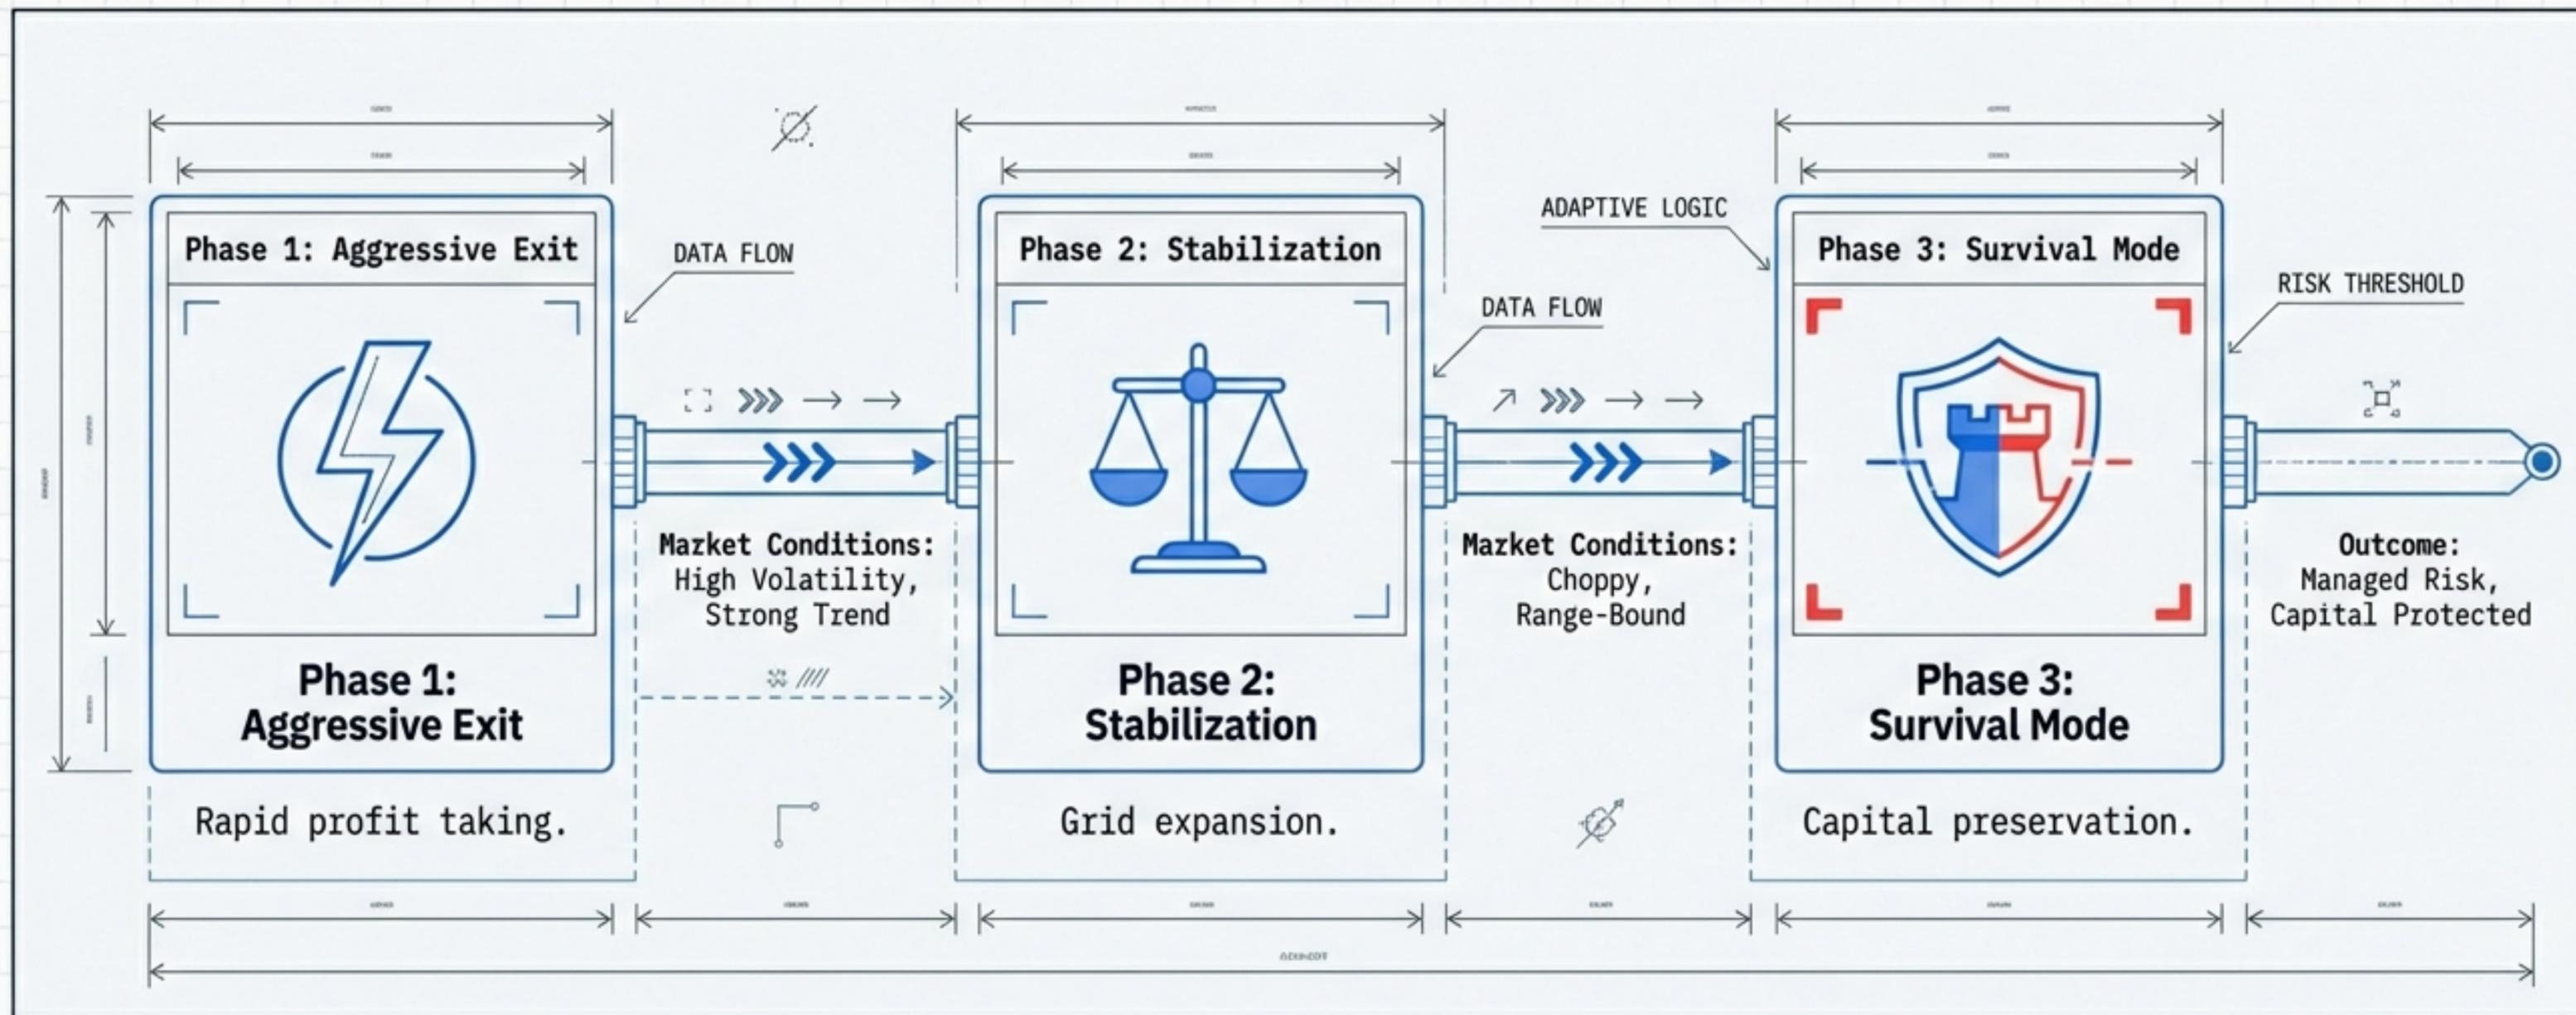

Assumes market movement against the position. Prepares a mathematical exit route before entry.

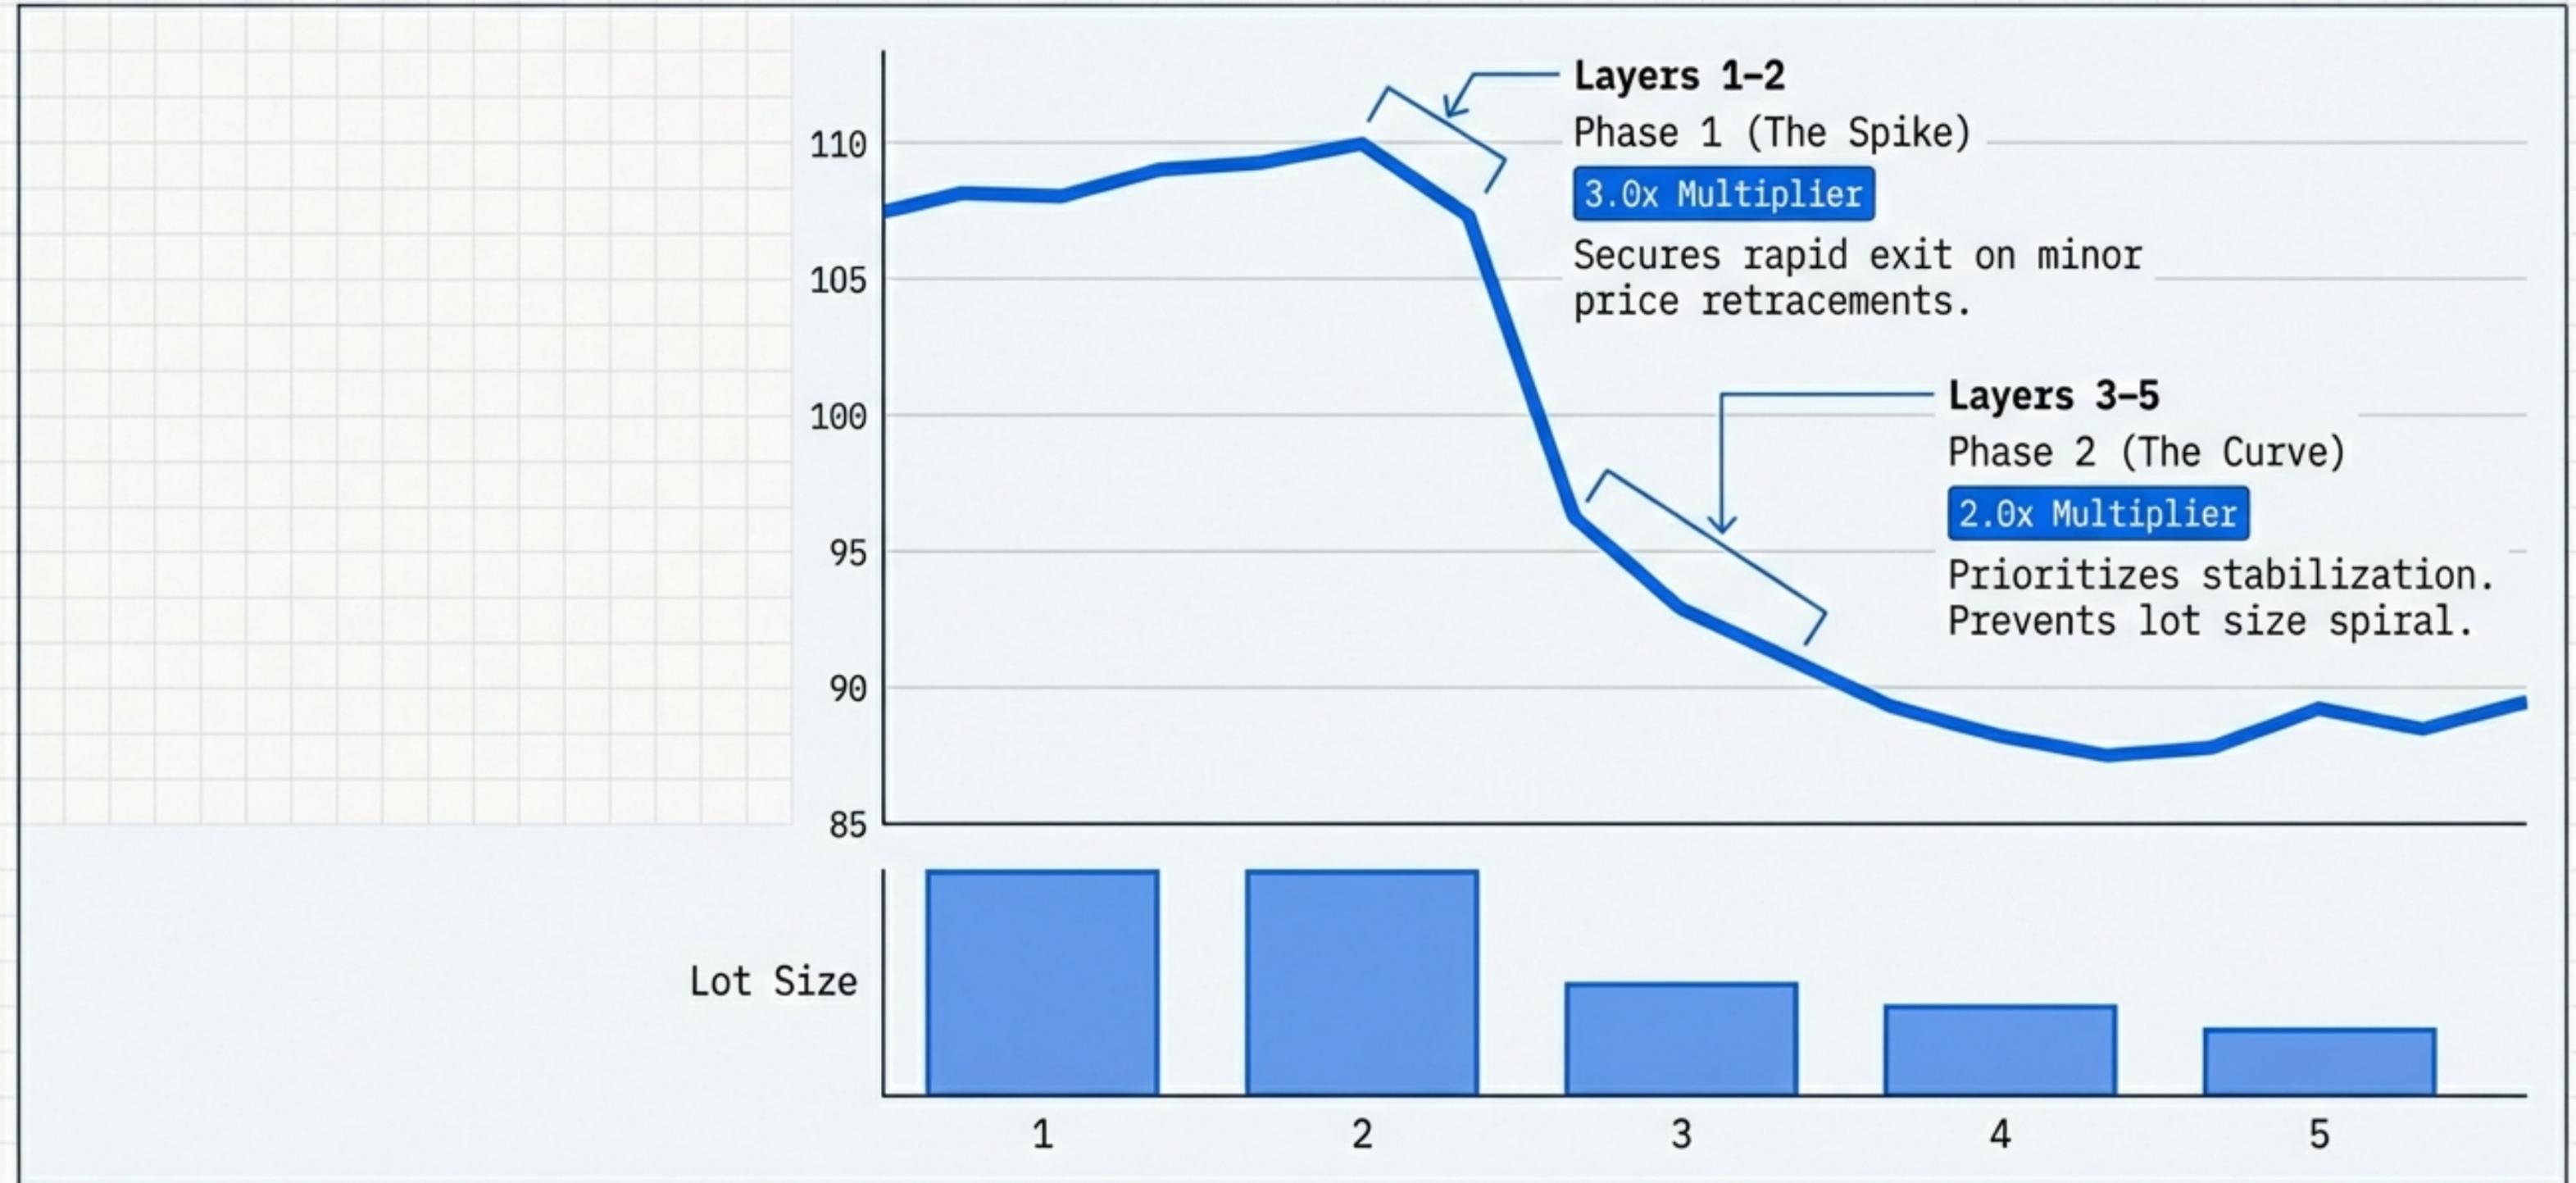

Designed not just to ride trends, but to engineer exits during market retracements.

# Core Engine: Smart Variable Aggression

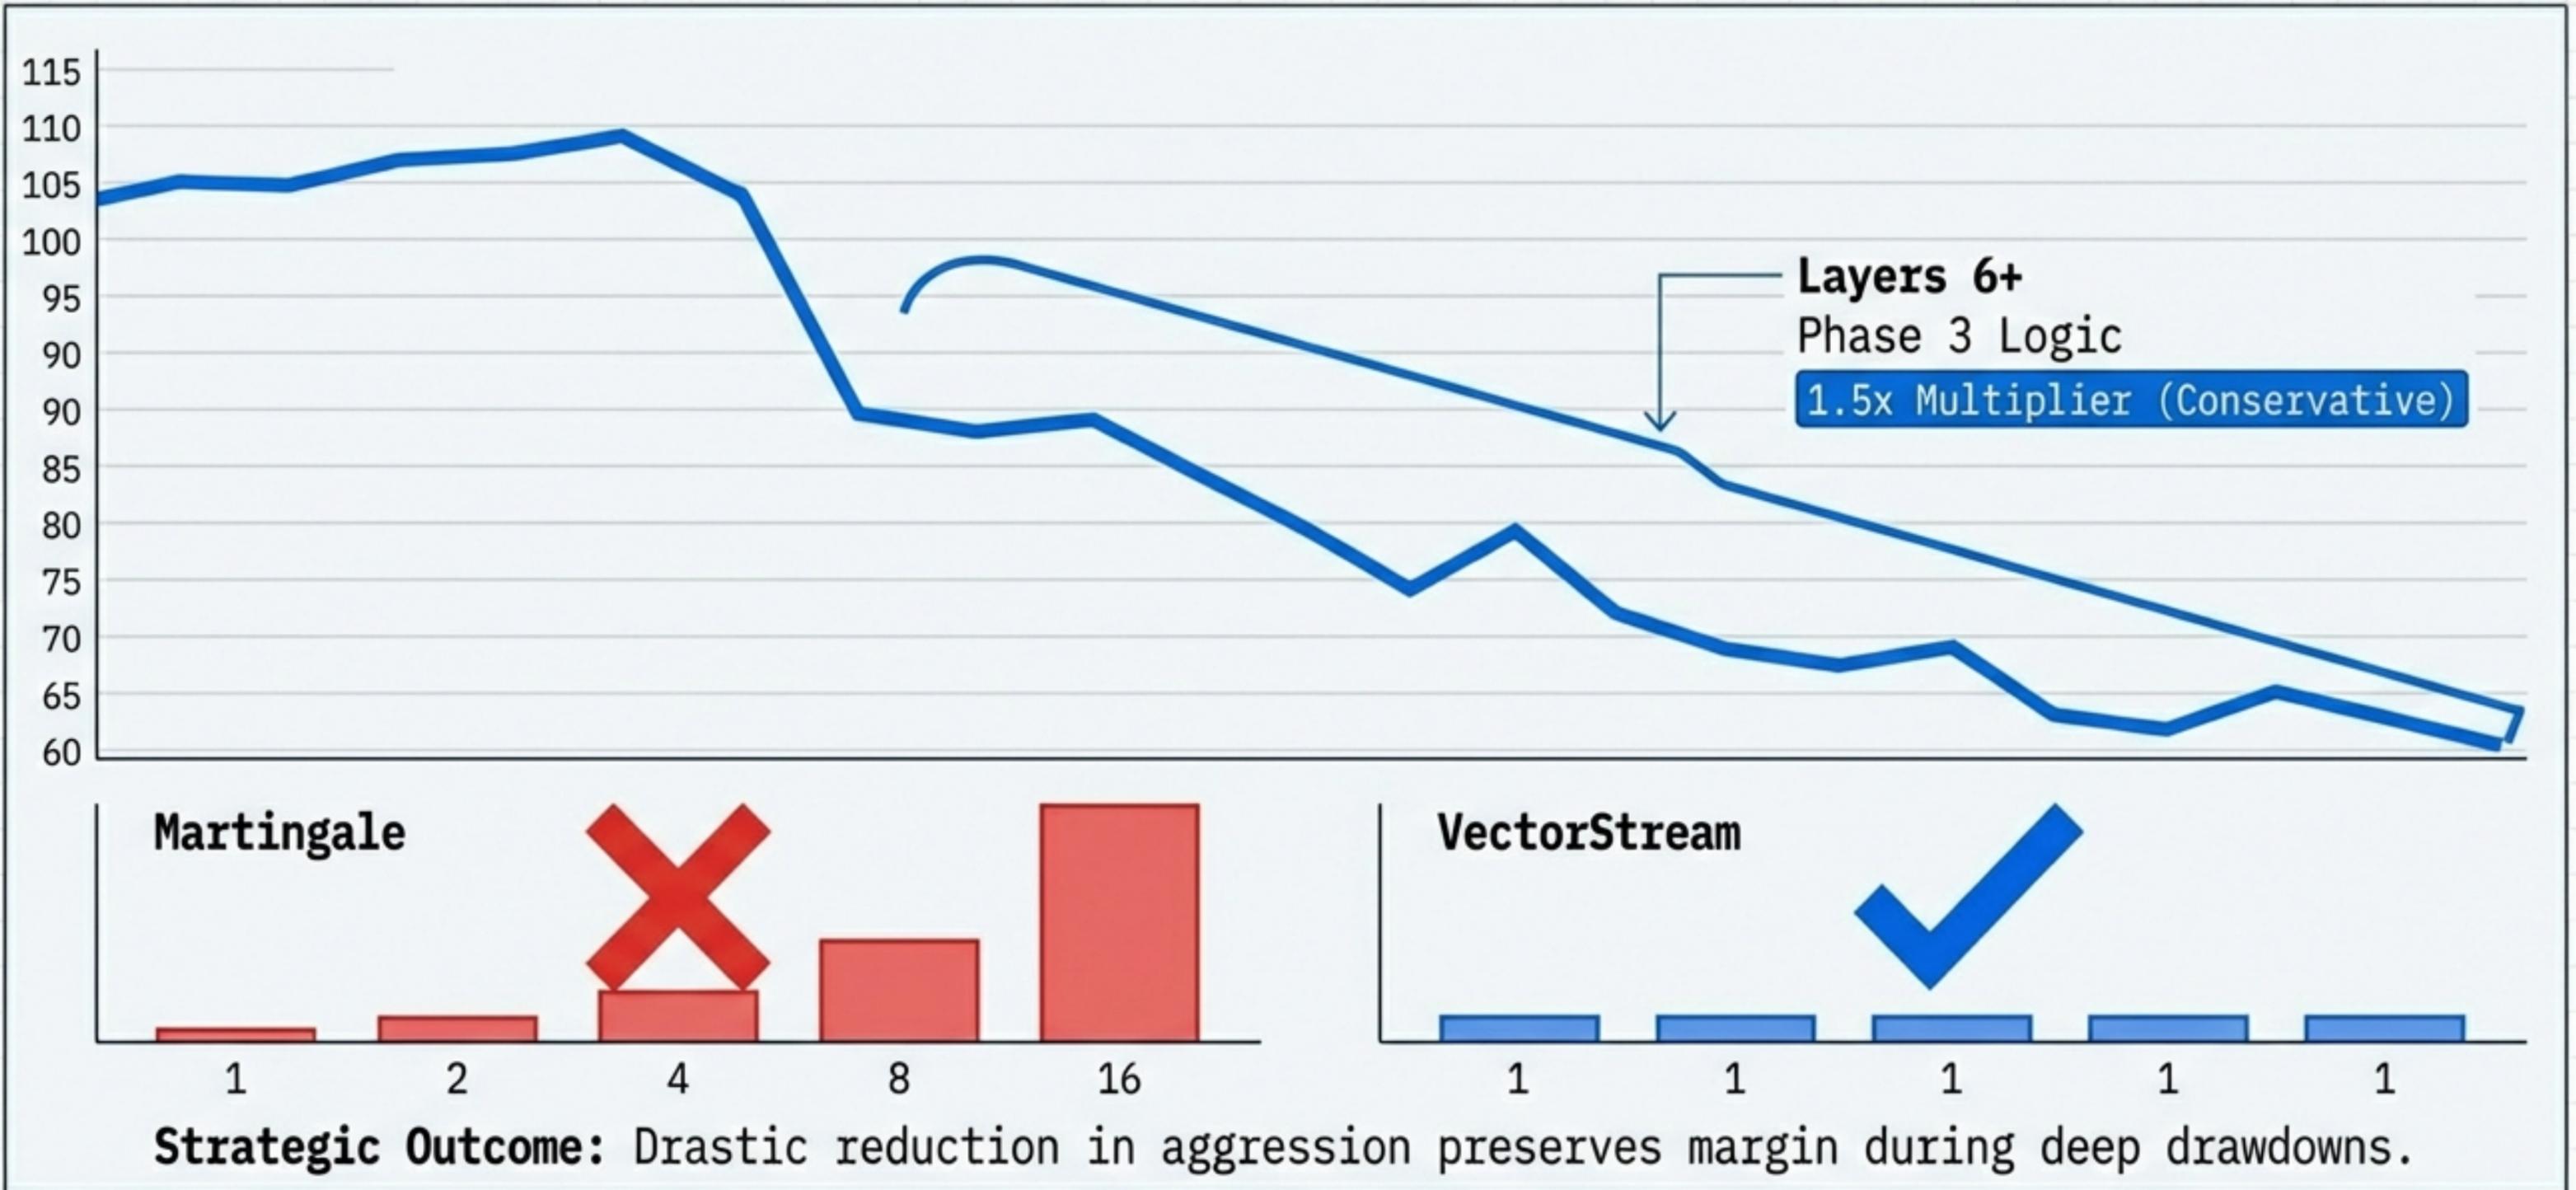

At the heart of VectorStream Pro is a sophisticated grid algorithm that adapts to market conditions in real-time. It moves through three distinct phases of aggression to manage risk.

# Logic Layers 1-5: Aggression & Stabilization

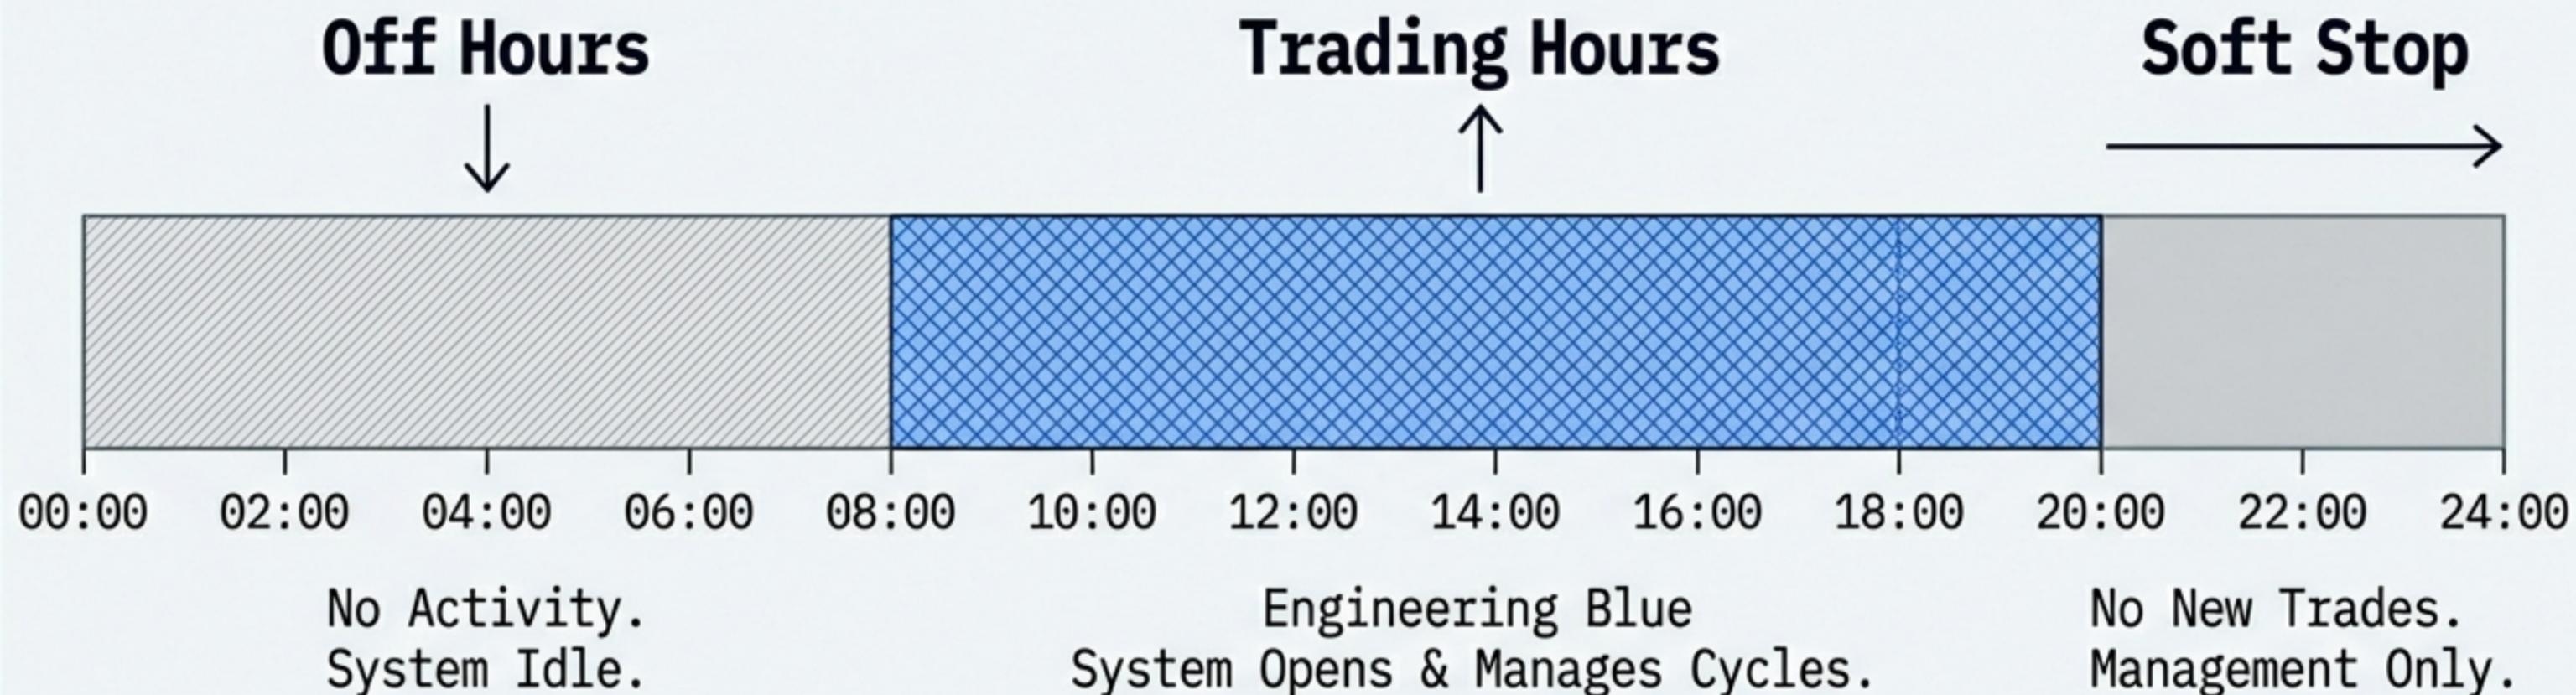

# Logic Layers 6+: Survival Protocol

# The 'Soft Stop' Time Filter

Solving Overnight Volatility & Ghost Drifts

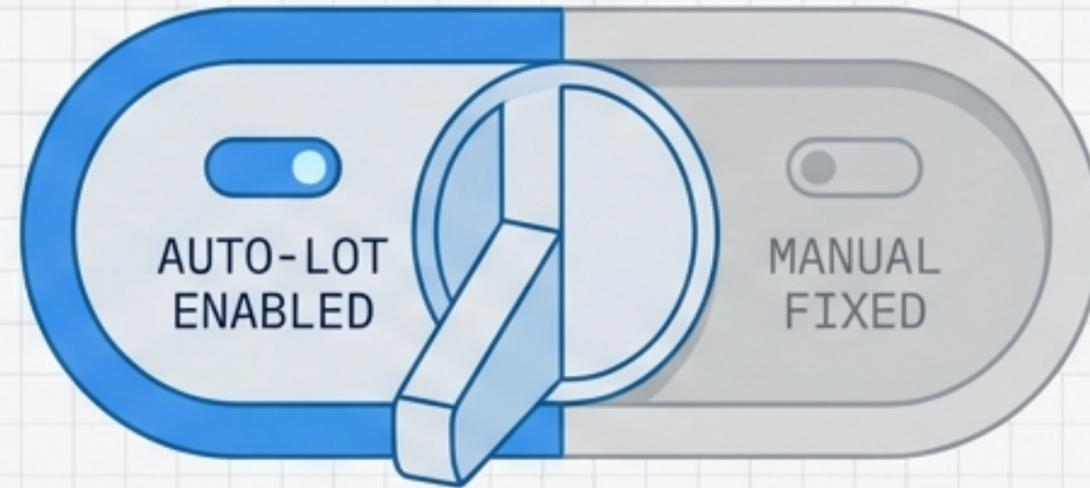

Prevents 'Ghost Drifts'—unsupervised overnight volatility and price gaps.  
The system intelligently closes existing positions but refuses new risk outside active hours.

# Money Management Architecture

## Option A: Auto-Lot (Dynamic)

- Calculates lot size automatically based on Equity.
- Utilizes 'Risk %' parameter for compounding growth.

## Option B: Manual Fixed Lot

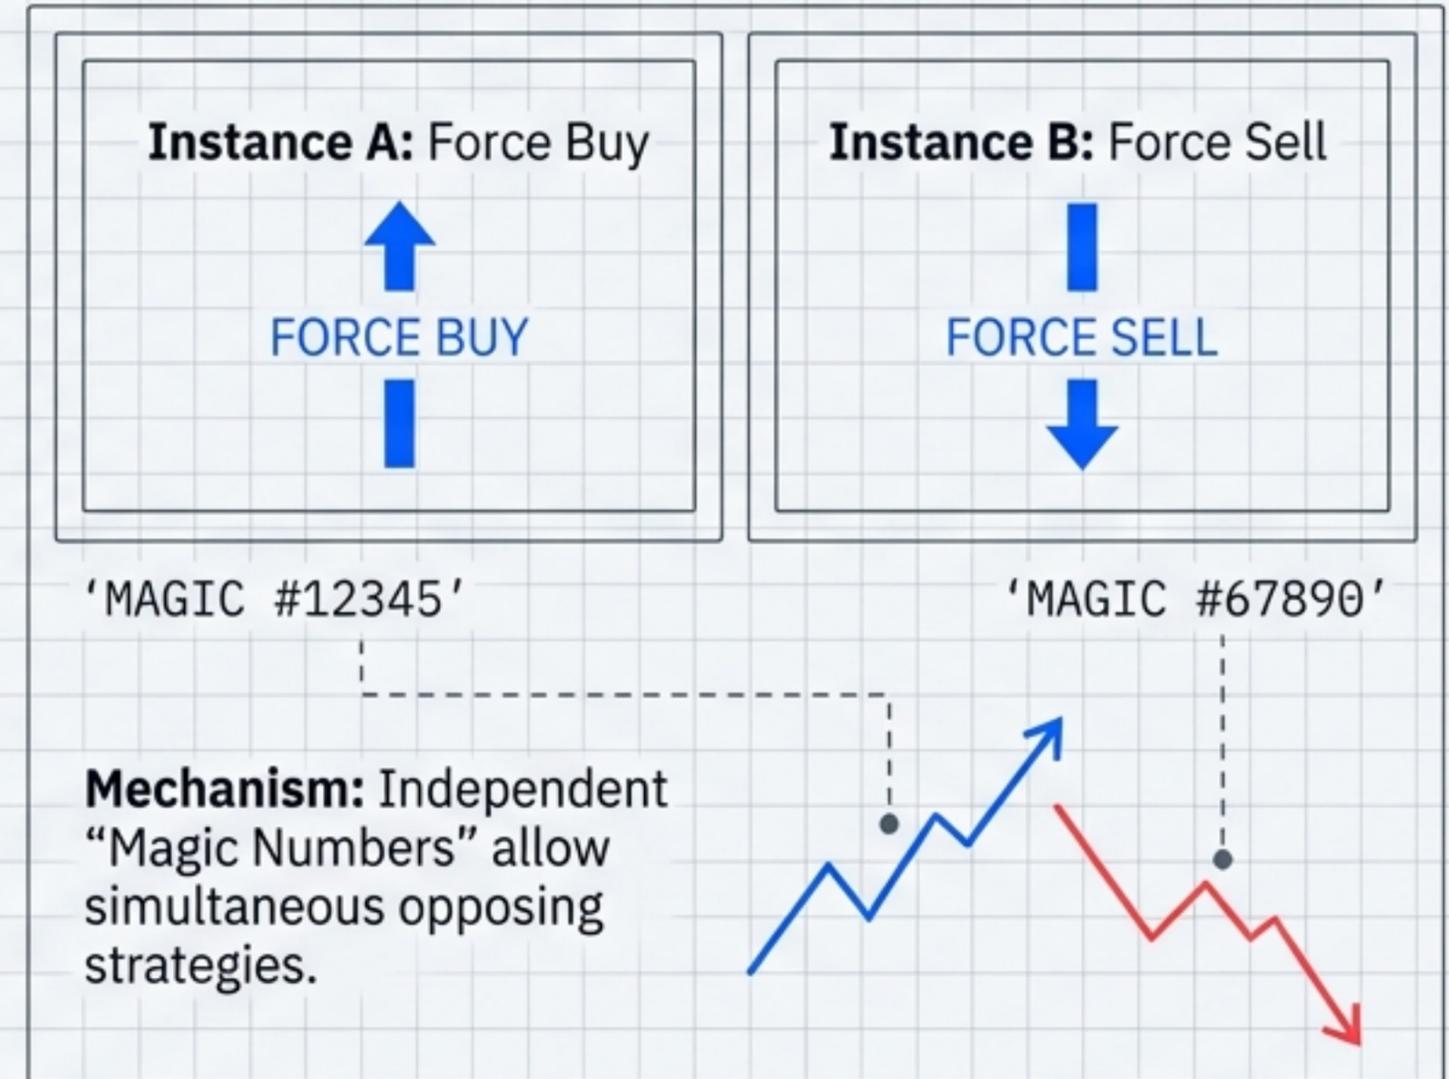

- User defines static starting lot size (e.g., 0.01).
- Precision control for fixed exposure.

# Operational Modes: Auto vs. Hedge

## Standard Mode

## Hedge Mode (Pro)

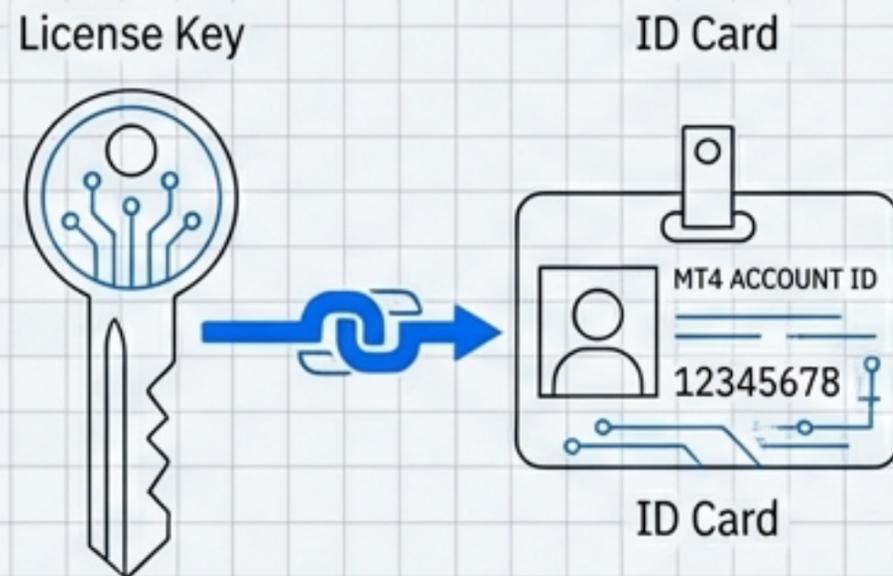

# Performance Stress Test: XAUUSD

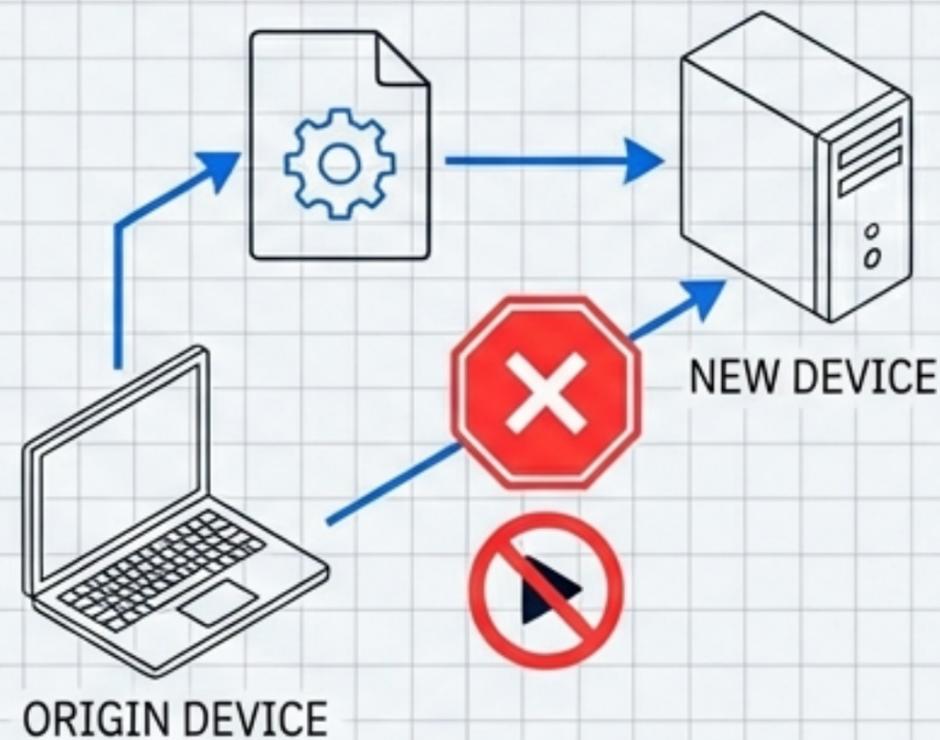

# Security & Licensing Infrastructure

## Smart-Lock Encryption

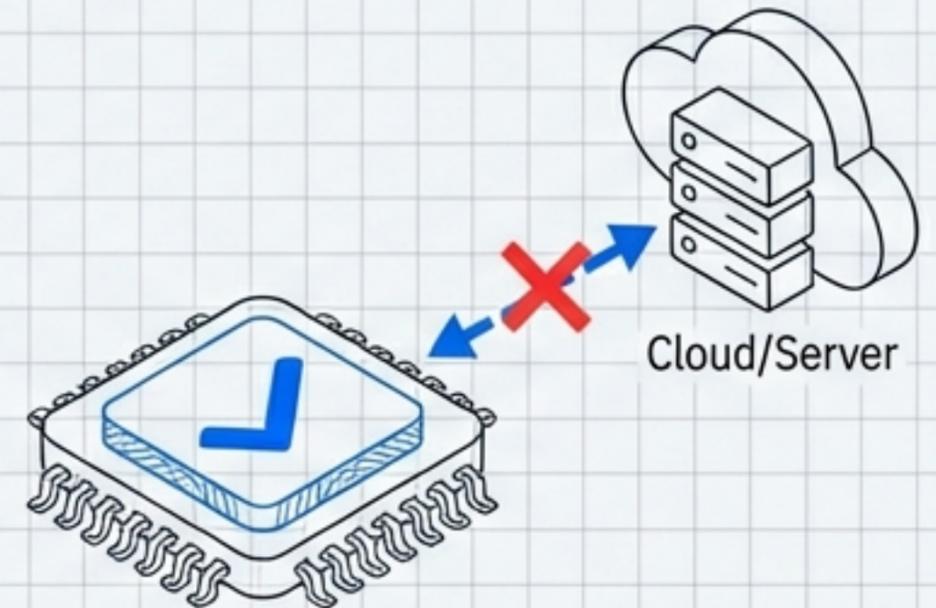

Hard-locked to specific MT4 Account Number.

## Anti-Piracy Protocol

Unauthorized movement blocks trade execution.

## Zero-Latency Validation

Offline code validation. No server lag.

# Technical Specifications

Platform	MetaTrader 4 (MT4)
Asset Class Focus	XAUUSD (Gold), Forex Majors
Timeframes	Optimized for M1 / M5 Execution
Execution Type	Automated Grid with Variable Aggression
Risk Management	Soft Stop (Time), Auto-Lot, Max Spread Protection

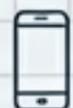

# Initialize Access
